What a Dealership Website Really Costs

Most dealership website platforms bill **per location**: every rooftop adds an inventory licensing fee, a management layer, or another vendor line item. That is the natural model for selling to single-store dealers — and the expensive one for a group that keeps growing. These are the numbers from consolidating **Motory Group** — a buy-here-pay-here auto group — onto a single platform, as published in **keryxsolutions.com/work/motory-group/**.

$19–24K	< $850	~1 week
PER-YEAR LICENSING, OLD MODEL	TOTAL RECURRING NOW	TO ADD A LOCATION

The per-location model

Motory Group's previous provider charged **$1,980 a year per location** for inventory licensing alone — about **$9,900 a year across five dealerships** — on top of **$28,500 a year in management fees**. At the group's current size, that model would cost **$19,000 to $24,000 a year**, and every new store meant another licensing line, another website project, and another negotiation.

One platform, one bill

Consolidated onto a single auto-mall platform, the group's **entire recurring software bill sits under $850 a year for all locations** — one domain, one inventory source. Location count simply stopped being a pricing axis: **Motory Group's eighth location added nothing to the platform bill**, and neither will the ninth.

What a new location costs now

A new rooftop is a configuration change, not a re-platform: the dealer page, inventory feed, and nearest-dealer geolocation go live in **about a week**, where the old model turned each opening into a three-month website project. For a group adding locations every few months, that difference compounds faster than the licensing savings themselves.
